### Why Glass?

PROS	CONS
<ol style="list-style-type: none"> <li>1. Glass maintains its luster. It does not fade, cloud or crack with age, therefore it maintains greater light transmission.</li> <li>2. Glass is easily cleaned. Glass is not affected by commonly used household cleaners, like Windex.</li> <li>3. Glass resists scratching.</li> <li>4. Glass block units have the same energy efficiency as acrylic block units.</li> <li>5. Does not have visible vinyl muntin strips between each block, therefore providing a monolithic, 1-piece appearance.</li> </ol>	<p>It is heavier than Acrylic. But, would you choose a patio door because it was lighter weight? Remember, it is only heavier <u>once!</u></p>
