

# Solid Vinyl Screen Door

Installation

Before installing your new screen door, please carefully read the instructions below.

## Tools you may need:

## Hardware Options:

### Screen Door Specifications:

- **Standard Sizes:** Width 30", 32" and 36", Height 80"
- **Screen:** UV resistant, American made fiberglass screen, 18-16 mesh
- **Material:** UV resistant foam PVC with superior skin strength
- **Screw Retention:** Superior to wood, will not split

## Easy Installation Steps:

### STEP 1

#### • Determine the size of your existing opening.

Measure the width and height of your existing opening (inside the door) to determine if you have chosen the correct door size. Allow 1/8" on each side and up to 3/8" from each side and 3/8" from the top and no more than 1" from the bottom. If you need to trim your door go to Step 3.

### STEP 2

#### • Hardware Options

Most standard screen door hardware will work great on your new solid vinyl screen door. Your door can be cut and drilled just like a wood door and surface mounted hinges can be screwed into the frame of the door. Most hinges can be accommodated by simply routing or mounting with screws. Latches and bar bolts can be added as well. Always use 3 hinges.

### STEP 3

#### • Trimming your new screen door.

If you have ever trimmed a wood screen door then you will have no trouble doing the same to your new Screen Tight™ Screen Door. Traditional tools, such as a circular saw, will do the job. Simply determine the desired amount to trim (**make sure not to trim more than 3/8" from any side and no more than 1" from the bottom**). **CAUTION, if you cut more than the specified amounts you will compromise the integrity of the door and void any warranty.**

## Frequently asked questions & answers:

#### •Will the material hold a fastener or screw?

Yes, better than wood. The solid cellular structure of the vinyl will not split or crack when attaching hinges and other hardware.

#### •Can I paint the door?

PVC materials are paintable. However, the nature and application of this product is not favorable for painting and will adversely affect its weatherability and void the warranty.

#### •Is the material resistant to the sun and weathering?

The door is made of exterior grade vinyl. There will be no yellowing or other damage from UV rays that is detectable to the human eye. There is an equivalent amount of UV inhibitors in the material to what would be in vinyl windows and upper end vinyl siding.
